4CH H.264 D1 Real-time Digital Video Recorder

4CH, H.264, quadplex, D1 realtime recording, Full HD 1080p output, GUI, dual stream, Linux, USB, motion detection, mobile support

The DVR200-004 is an integrated H.264 digital video recorder (DVR) designed for small to medium scale security projects. Capable of real-time recording at up to D1 resolution, the DVR combines the features of a time-lapse audio/video recorder, a multiplexer, and a video server altogether to create an all-in-one, high-performance DVR solution. Its outstanding quadplex operation enables users to view live video, search and playback any recorded footage by date, time or event, and to remotely access the unit on a PC via network, whilst the video recording is still ongoing concurrently without being interrupted.

Advanced H.264 Compression

The H.264 technology provides superb compression, which consumes much less network bandwidth and hard drive space compared to other standards without compromising image quality and transmission speed, while greatly increasing the amount of video evidence the user can archive.

Flexible Storage Management

The built-in storage supports up to 2 internal 3.5" SATA HDDs or DVD-RW drives, offering adequate storage capacity or data backup for recorded video archive. The DVR also comes with 2 USB 2.0 ports for expandable storage or data backup with external storage media, such as USB Flash Drives or External HDDs.

Full HD 1080P Output

The DVR200 Series offers Full HD 1080p with digital output connectivity, allowing the user to view real-time surveillance footage with superior, uncompressed digital video for the highest, crispest image quality on a 16:9 monitor screen.

Dual Stream Technology

The resolution, bit rate, frame rate, and other parameters of the output streams can be individually set to meet various requirements as the video feeds are recorded, managed or transmitted, enabling the user to adjust the stream settings in the most efficient manner to ensure optimized video surveillance operation.
