Changes are periodically made to the information contained herein and will be incorporated into later versions of the manual. The information contained is subject to change without prior notice.

FCC Notice

This equipment has been tested and found to comply with the limits for a Class-A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy. It may cause harmful interference to radio communications if the equipment is not installed and used in accordance with the instructions. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

CE Mark Warning

This is a Class-A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

1. Overview

Antaira Technologies' LNP-1002C-SFP-24 industrial PoE+ Gigabit unmanaged Ethernet switch series is IP30 rated and DIN-Rail mountable. Each unit is built with 8*10/100Tx Ethernet ports that support IEEE 802.3at with high power PoE up to 30W per port, and 2*GigE combo ports (2*10/100/1000Tx RJ45, and 2*100/1000 SFP slots for fiber).

This product series provides a high EFT and ESD protection to prevent any unregulated voltage and is suitable for harsh environments. It supports the power redundancy feature by having a dual power input design with reverse polarity protection. In addition, the built-in relay warning function alerts maintainers when power failures occur.

The LNP-1002C-SFP-24 series supports a low voltage power input range of 12V - 36VDC (with voltage booster). It also has two models: one with an operating temperature range of -10 to 70°C, and the other with an extended operating temperature range of -40 to 75°C. This product series has been designed to fulfill special needs for industrial automation and harsh outdoor environment applications.

1.1 Key Features

- System Interface/Performance
 - All RJ-45 ports support the auto MDI/MDI-X function
 - Embedded 8*10/100Tx (PSE 30W/Port), 2*Gigabit Combo Ports (2*10/100/1000Tx RJ45 and 2* 100/1000 SFP Slots)
 - Store-and-forward switching architecture
 - 8K MAC address table
 - Power line EFT protection: 2,000VDC; Ethernet ESD protection: 6,000VDC
- Power Input
 - DC 12~36V (voltage booster) redundant power, with a 6-pin removal terminal block
- Operating Temperature
 - Standard operating temperature model: -10°C ~ 70°C
 - Extended operating temperature model (-T): -40°C ~ 75°C
- Case/Installation
 - IP-30 protection
 - DIN-Rail and wall mount design

1.2 Package Contents

- 1 - LNP-1002C-SFP-24 (T): 10-port industrial PoE+ unmanaged Ethernet switch with 8*10/100Tx (30W/port), 2*Gigabit combo ports (2*10/100/1000Tx RJ45 and 2*100/1000 SFP slots); 12~36VDC (voltage booster)
- 1 - User manual
- 1 - Product CD
- 2 - Wall mounting brackets and screws
- 1 - DC cable –18 AWG & DC jack 5.5x2.1mm

1.3 Safety Precaution

Attention: If the DC voltage is supplied by an external circuit, please use a protection device on the power supply input. The industrial Ethernet switch's hardware specs, ports, cabling information, and wiring installation will be described within this user manual.

2. Hardware Description

2.1 Physical Dimensions

Figure 2.1, below, shows the physical dimensions of Antaira Technologies' LNP-1002C-SFP-24 series: 10-port industrial PoE+ unmanaged Ethernet switch with 8*10/100Tx (30W/port), 2*Gigabit combo ports (2*10/100/1000Tx RJ45 and 2*100/1000 SFP slots); 12-36VDC (voltage booster).

(W x D x H) is 46mm x 99mm x 142mm

Figure 2.1

LNP-1002C-SFP-24 Series Physical Dimensions

2.2 Front Panel

The front panel of the LNP-1002C-SFP-24 series: 10-port industrial PoE+ unmanaged Ethernet switch with 8*10/100Tx (30W/port), 2*Gigabit combo ports (2*10/100/1000Tx RJ45 and 2* 100/1000 SFP slots); 12~36VDC (voltage booster) is shown below in *Figure 2.2*.

Figure 2.2 - Front Panel of the LNP-1002C-SFP-24 Series

2.3 Top View

Figure 2.3, below, shows the top panel of the LNP-1002C-SFP-24 series switch that is equipped with one 6-pin removal terminal block connector for dual DC power inputs (48-55 VDC).

Figure 2.3
Top Panel View of LNP-1002C-SFP-24 Series

2.4 LED Indicators

There are LED light indicators located on the front panel of the industrial Ethernet switch that display the power status and network status. Each LED indicator has a different color and has its own specific meaning, see below in *Table 2.1*.

LED	Color	Description	
P1	Green	On	Power input 1 is active
		Off	Power input 1 is inactive
P2	Green	On	Power input 2 is active
		Off	Power input 2 is inactive
Fault	Red	On	Power input 1 or 2 is inactive
		Off	Power input 1 and 2 are both functional, or no power, inputs/ports link is active/port alarm is disabled
PoE Indicators (Port 1~8)	Green	On	The port is supplying PoE power
		Off	No powered-device attached or power supplying fails
LAN Port 1 ~ 8 (Upper LED)	 Green	On	Connected to network, 100Mbps
		Flashing	Networking is active
		Off	Not connected to network
LAN Port 1 ~ 8 (Lower LED)	 Green	On	Connected to network, 10Mbps
		Flashing	Networking is active
		Off	Not connected to network

Gigabit Combo Port LED Indicators

LED	Color	Description	
SFP Port Combo G1~G2 LNK/ACT	Green 1000Mbps	On	Connected to network
		Flashing	Networking is active
	Amber 100Mbps	Off	Not connected to network
LAN Port Combo G1 ~G2 (Upper LED)	 Green	On	Connected to network, 1000Mbps
		Flashing	Networking is active
		Off	Not connected to network
LAN Port Combo G1 ~G2 (Lower LED)	 Green	On	Connected to network, 10/100Mbps
		Flashing	Networking is active
		Off	Not connected to network

Table 2.1
LED Indicators for LNP-1002C-SFP-24 Series

2.5 Ethernet Ports

■ RJ-45 Ports

RJ-45 Ports (Auto MDI/MDIX): The RJ-45 ports (LAN 1~8) are auto-sensing for 10Base-T, or 100Base-Tx devices connections, and Gigabit Combo RJ-45 ports (LAN G1~G2) are auto-sensing for 10Base-T, 100Base-Tx, and 1000Base-T devices connections. Auto MDI/MDIX means that the switch can connect to another switch or workstation without changing the straight-through or crossover cabling. See the figures as below for straight-through and crossover cabling schematics.

■ RJ-45 Pin Assignments (Table 2.2)

Pin Number	Assignment
1	Rx+
2	Rx-
3	Tx+
6	Tx-

Table 2.2
RJ45 Pin Assignments

Note: The "+" and "-" signs represent the polarity of the wires that make up each wire pair.

All ports on this industrial Ethernet switch support automatic MDI/MDI-X operations. Users can use straight-through cables (see figure below) for all network connections to PCs, servers, and other switches or hubs. With straight-through cable, pins 1, 2, 3, and 6, at one end of the cable, are connected straight through to pins 1, 2, 3 and 6 at the other end of the cable. The table below (Table 2.3) shows the 10BASE-T/100BASE-TX/1000BASE-T MDI and MDI-X port pin outs.

Pin MDI-X	Signal Name	MDI Signal Name
1	Receive Data plus (RD+)	Transmit Data plus (TD+)
2	Receive Data minus (RD-)	Transmit Data minus (TD-)
3	Transmit Data plus (TD+)	Receive Data plus (RD+)
6	Transmit Data minus (TD-)	Receive Data minus (RD-)

Table 2.3
Ethernet Signal Pin Outs

The following figures show the cabling schematics for straight-through and crossover cables.

Figure 2.4 - Straight-Through Cables Schematic

Figure 2.5 - Crossover Cables Schematic

The following figures show the 10 and 100 Ethernet RJ-45 pin outs.

Figure 2.6 - RJ45 Ethernet Port Pin Outs

Figure 2.7 - Straight-Through Cables Schematic

Figure 2.8 - Crossover Cables Schematic

2.6 Cabling

Use the four twisted-pair, category 5e, or the above cabling for RJ-45 port connections. The cable between the switch and the link partner (switch, hub, workstation, etc.) must be less than 100 meters (328 ft.) long.

2.6.1 Gigabit Combo Port - Copper/SFP (Mini-GBIC)

Antaira Technologies' LNP-1002C-SFP-24 series has two auto-detected Gigabit combo ports (2*10/100/1000Tx RJ45 and 2*100/1000 SFP slots for fiber connection).

- The Gigabit copper (10/100/1000T) ports should use category 5e or the above UTP/STP cable for the connection up to 1000Mbps. The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communications.
- The SFP slots supporting dual rate mode, which can switch the connection speed between 100 and 1000Mbps. They are used for connecting to the network segment with a single or multi-mode fiber. Users must first choose the appropriate SFP transceiver to plug into the slots, and then choose the proper multi-mode or single-mode fiber according to the transceiver being used. When fiber optic is used, it transmits at a speed up to 1000 Mbps and it can prevent noise interference from the system.

****Note:**

The Gigabit combo ports (SFP/Copper) cannot be working at the same time. The SFP port has a higher priority than the copper port. When inserting a 100M or 1000M SFP transceiver (which has connected to the remote device via fiber cable) into the SFP port, the connection of the accompanying copper port link will be down.

The small form-factor pluggable (SFP) is a compact optical transceiver used in optical communications for both telecommunication and data communication applications.

To connect the transceiver and LC cable, please follow below steps:

First, insert the SFP transceiver module into the SFP slot as shown below in *Figure 2.9*. Notice that the triangle mark is at the bottom of the SFP slot. *Figure 2.10* shows that the SFP transceiver module has been inserted.

Figure 2.9 - Transceiver to the SFP Module

Figure 2.10 - Transceiver Inserted

Second, insert the fiber cable of the LC connector into the transceiver as shown in *Figure 2.11*.

Figure 2.11 - LC Connector to the Transceiver

To remove the LC connector from the transceiver, please follow the steps shown below:

1. Press the upper side of the LC connector from the transceiver and pull it out to release as shown below in *Figure 2.12*.

Figure 2.12
Remove LC Connector

2. Push down the metal clasp and pull the transceiver out by the plastic part as shown below in *Figure 2.13*.

Figure 2.13
Pull Out from the SFP Module

2.7 Wiring the Power Inputs

Please follow the below steps to insert the power wire.

1. Insert the positive and negative wires into the PWR1 (V1+, V1-) and PWR2 (V2+, V2-) contacts on the terminal block connector as shown below in *Figure 2.14*.

Figure 2.14

Power Terminal Block

2. Tighten the wire-clamp screws to prevent the wires from loosening, as shown below in *Figure 2.15*.

Figure 2.15

Power Terminal Block

****Note:**

- Only use copper conductors, 60/75° C, tighten to 5 lbs.
 - The wire gauge for the terminal block should range between 18~20 AWG.
-

2.8 Wiring the Fault Alarm Contact

The fault alarm contact is in the middle of the terminal block connector as the picture shows below in *Figure 2.16*. By inserting the wires, it will detect the fault status including power failure or port link failure (managed industrial switch only) and form a normal open circuit. An example is shown below in *Figure 2.16*.

Figure 2.16

Wiring the Fault Alarm Contact

-
- **Note:**
- The wire gauge for the terminal block should range between 12 ~ 24 AWG.
 - If only using one power source, jumper Pin 1 to Pin 5 and Pin 2 to Pin 6 to eliminate power fault alarm.
-

3. Mounting Installation

3.1 DIN-Rail Mounting

The DIN-Rail is pre-installed on the industrial Ethernet switch from the factory. If the DIN-Rail is not on the industrial Ethernet switch, please refer to Figure 3.1 to learn how to install the DIN-Rail on the switch.

Figure 3.1

The Rear Side of the Switch and DIN-Rail Bracket

Follow the steps below to learn how to hang the industrial Ethernet switch.

1. Use the screws to install the DIN-Rail bracket on the rear side of the industrial Ethernet switch.
2. To remove the DIN-Rail bracket, do the opposite from step 1.
3. After the DIN-Rail bracket is installed on the rear side of the switch, insert the top of the DIN-Rail on to the track as shown below in *Figure 3.2*.

Figure 3.2

Insert the Switch on the DIN-Rail

4. Lightly pull down the bracket on to the rail as shown below in *Figure 3.3*.

Figure 3.3

Stable the Switch on DIN-Rail

5. Check if the bracket is mounted tightly on the rail.
6. To remove the industrial Ethernet switch from the rail, do the opposite from the above steps.

3.2 Wall Mounting

Follow the steps below to mount the industrial Ethernet switch using the wall mounting bracket as shown below in *Figure 3.4*.

1. Remove the DIN-Rail bracket from the industrial Ethernet switch by loosening the screws.
2. Place the wall mounting brackets on the top and bottom of the industrial Ethernet switch.
3. Use the screws to screw the wall mounting bracket on the industrial Ethernet switch.
4. Use the hook holes at the corners of the wall mounting bracket to hang the industrial Ethernet switch on the wall.
5. To remove the wall mount bracket, do the opposite from the steps above.

Figure 3.4

Remove DIN-Rail Bracket from the Switch

Below, in *Figure 3.5* are the dimensions of the wall mounting bracket.

Figure 3.5

Wall Mounting Bracket Dimensions

4. Hardware Installation

4.1 Installation Steps

This section will explain how to install Antaira Technologies' LNP-1002C-SFP-24 series: 10-port industrial PoE+ unmanaged Ethernet switch with 8*10/100Tx (30W/port), 2*Gigabit combo ports (2*10/100/1000Tx RJ45 and 2* 100/1000 SFP slots); 12~36VDC (voltage booster).

Installation Steps

1. Unpack the industrial Ethernet switch from the original packing box.
2. Check if the DIN-Rail bracket is screwed on the industrial Ethernet switch.
 - If the DIN-Rail is not screwed on the industrial Ethernet switch, please refer to the **DIN-Rail Mounting** section for DIN-Rail installation.
 - If you want to wall mount the industrial Ethernet switch, please refer to the **Wall Mounting** section for wall mounting installation.
3. To hang the industrial Ethernet switch on a DIN-Rail or wall, please refer to the **Mounting Installation** section.
4. Power on the industrial Ethernet switch and then the power LED light will turn on.
 - If you need help on how to wire power, please refer to the **Wiring the Power Inputs** section.
 - Please refer to the **LED Indicators** section for LED light indication.
5. Prepare the twisted-pair, straight-through category 5 cable for Ethernet connection.
6. Insert one side of the RJ-45 cable into switch's Ethernet port and on the other side into the networking device's Ethernet port, e.g. switch PC or server. The Ethernet port's (RJ-45) LED on the industrial Ethernet switch will turn on when the cable is connected to the networking device.
 - Please refer to the **LED Indicators** section for LED light indication.
7. When all connections are set and the LED lights all show normal, the installation is complete.

5. Network Application

This segment provides an example of an industrial Ethernet switch application (*Figure 5.1*).

Figure 5.1

Industrial PoE Ethernet Switch Application Reference

6. Trouble Shooting

- Verify you have the right power cord or adapter. Never use a power supply or adapter with a non-compliant DC output voltage or it will burn the equipment.
- Select the proper UTP or STP cable in order to construct the network. Use an unshielded twisted-pair (UTP) or shield twisted-pair (STP) cable for RJ-45 connections: 100Ω Category 5e for 10M/100Mbps. Also be sure that the length of any twisted-pair connection does not exceed 100 meters (328 feet).
- **Diagnosing LED Indicators:** To assist in identifying problems, the switch can be easily monitored with the LED indicators which help to identify if any problems exist.
 - Please refer to the LED Indicators section for LED light indication.
- If the power indicator LED does not turn on when the power cord is plugged in, the user may have a problem with the power cord. Check for loose power connections, power losses or surges at the power outlet.
 - Please contact Antaira for technical support service, if the problem still cannot be resolved.
- If the industrial switch LED indicators are normal and the connected cables are correct but the packets still cannot transmit, please check the system's Ethernet devices' configuration or status.

7. Technical Specifications

Table 7.1 has the technical specifications for Antaira Technologies LNP-1002C-SFP-24 series: 10-port industrial PoE+ unmanaged Ethernet switch with 8*10/100Tx (30W/Port), 2* Gigabit combo ports (2*10/100/1000Tx RJ45, and 2* 100/1000 SFP Slots); 12~36VDC.

Standard	IEEE 802.3 10BaseT Ethernet IEEE 802.3u 100BaseTX Fast Ethernet IEEE 802.3ab 1000BaseT IEEE 802.3z Gigabit Fiber IEEE 802.3at Power Over Ethernet
Protocol	CSMA/CD
Transfer Rate	14,880pps for Ethernet port 148,800pps for Fast Ethernet port 1,488,000pps for Gigabit Ethernet port
Transmission Distance	Up to 100M
Transmission Speed	Up to 1000Mbps
MAC Address	8K Table Size
RJ45 (Ethernet) Port	8*10/100Tx (30W/Port) + 2* 10/100/1000Tx (Gigabit Combo) auto negotiation speed, full/half duplex mode, and auto MDI/MDI-X connection
